City prepared for ice and snow

Centerville Public Works Department crews work to provide quality services so motorists can safely travel our roadways.

When snow or ice is predicted, our crews pre-treat with brine to reduce the slick spots that form early, and help salt melt faster, improving roadway conditions more quickly.

During a winter storm event where snow and/ or ice are accumulating on roadways, trucks outfitted with plow blades and salt spreaders are dispatched throughout the City.

- Priority streets: major roadways, hills, bridges and emergency routes - are cleared first.
- Collector streets: are the second priority. Once first and second priority streets are clear, crews begin clearing residential streets in each area. However, as long as it's still snowing, crews must focus on priority streets.
- Residential streets: While clearing residential areas, crews make one pass in and one pass out to provide for two-way traffic. Depending on the severity of the storm, crews may leave residential areas at any time to concentrate on priority roadways.
